DARLING HARBOUR LIVE

PRODUCT: Custom expanded metal sun 3426 and Bespoke fixing system

ARCHITECT: Populous & Hassell

PHOTOGRAPHER: Rob Burnett

Darling Harbour Live is Sydney's new international convention, exhibition and entertainment precinct. Made up of three separate venues, each with their own unique architectural character, Darling Harbour Live is a world class entertainment precinct sure to capture the hearts of locals and visitors for many years to come.

The theatre, situated at the southern end of the precinct, utilises a custom designed expanded metal sunshade that covers the Darling Drive and Pier Street sides of the building. The designers worked closely with Locker Group to acquire the right materials for maintaining shade and privacy inside the building, as well as suiting the unique engineering requirements of the project.

These custom sheets were installed in such a way to create large geometric surfaces that provide a vibrant, modern appeal to enhance not just the theatre itself, but the entire precinct.

CATHEDRAL SQUARE

 **PRODUCT:** Pic Perf™ & Ikon 511

 **ARCHITECT:** Brisbane City Council

 **PHOTOGRAPHER:** Rob Burnett

Cathedral Square is in the heart of Brisbane's central business district and the project began as a way to rejuvenate the area into a more inviting and aesthetically cohesive public space.

Locker Group worked closely with the designers to supply materials that would support the goal of modernisation without completely separating it from its namesake, the gothic revival style St John's Cathedral. Primarily, Pic Perf was used to help maintain this cohesion, with the perforated sheets featuring images that reflect the archways, columns, and other elements of the cathedral's design.

The Pic Perf was anodised with sovereign gold, providing a classic, regal appeal. We also used woven Ikon 511 mesh wire to disguise the entry to the carpark below.

JOHNSON HOTEL

 **PRODUCT:** Transit 210

 **ARCHITECT:** Blackbox Retail Projects

 **PHOTOGRAPHER:** Rob Burnett

The Johnson Hotel in Spring Hill, Queensland features an elegant, sophisticated bistro. The bistro itself is expansive and covers a lot of ground. The designers utilised our Transit 210 wire mesh curtains to delineate the space into smaller, more intimate areas. Set on heavy duty tracks, these curtains can be drawn to reopen the bistro for larger functions.

When used to create a more personal dining space, our curtains allow light and air to flow throughout the venue without sacrificing the cohesive whole. Ultimately, these stainless steel curtains add an additional touch of class to an already beautiful space.

LIGHT RAIL

 **PRODUCT:** Pic Perf

 **ARCHITECT:** Architecture & Access (John Holland)

 **PHOTOGRAPHER:** Rob Burnett

The stops along Sydney's inner west light rail line were recently overhauled to more accurately reflect the surrounding suburbs. Segments of this line have been used since the 1850s, and designers needed to produce an aesthetic that paid homage to the history of the line while at the same time looked to Sydney's future as a cultural hub.

The light rail project made use of Locker Group's Pic Perf for the weather shielding of the stops. Utilising eye catching and stylised graphics that promote the culture and history of each area, the designers have successfully created a unique aesthetic that makes this light rail line stand out among the rest.

PURE APARTMENTS

PRODUCT: Pic Perf

ARCHITECT: Group GSA

PHOTOGRAPHER: Rob Burnett

Pure Apartments is 9 stories of upmarket residences, located in Brisbane's inner suburb of Spring Hill. Due to its unique position, the building forms part of a new commercial corridor that extends inwards towards the central business district.

With frontages on three sides, an abundance of trees surrounding the complex, and a boutique lobby arrangement, Pure Apartments adds some character to the area for residents and neighbours alike.

Locker Group's Pic Perf was used in the facades. Our precision perforated metal sheets were designed to extend the tree-lined surroundings of the building, subsequently providing a unique texture and striking aesthetic.

NIDA

 **PRODUCT:** Pic Perf and standard Perf

 **ARCHITECT:** Hassell

 **PHOTOGRAPHER:** Rob Burnett

The National Institute of Dramatic Art in Sydney has unique design requirements as a centre for both education and the performing arts, necessitating the need for spaces that cater to both. A world leader in their field, Nida also needed a look that would reflect this to the public.

Employing both Pic Perf and Perforated metal products from Locker Group's range, the designers were able to establish an upscale, modern look through a sharp interplay of different textures.

One facade of the building uses the contrasting textures to display the Nida logo, while the other uses Pic Perf to promote the building's use - a stylish image of a group of actors.

RYDGES HOTEL

PRODUCT: Expanded metal sun 636a

ARCHITECT: Mostaghim Associates

PHOTOGRAPHER: Rob Burnett

Rydges is a four point five star hotel situated in Fortitude Valley, Brisbane. The suburb itself is aesthetically exceptional, with a contrasting balance between the elegant and the grungy, where heritage sites stand side by side with contemporary designs.

The designers of Rydges wanted to move away from the conventional design approach for a business hotel. The porte-cochere and main entry to the hotel are on a cobbled laneway at the rear of the site.

It is this entryway where Locker Group has contributed to the unique design of the hotel, supplying our expanded metal mesh in a profile that efficiently reduces sunlight for those inside. Finished in an eye-catching gold, this porte-cochere leaves a strong first impression of a beautifully designed hotel.

PEDESTRIAN LINK, UQ

 **PRODUCT:** Dragonscale™

 **ARCHITECT:** Cox Rayner

 **PHOTOGRAPHER:** Rob Burnett

The University of Queensland's pedestrian link bridge serves as the new eastern entrance to the campus. The pedestrian bridge improves access for those with limited mobility, and during the semester it's estimated that around 20,000 people use the link on a daily basis.

The University of Queensland has a long standing commitment to sustainability, and this project reflects that - solar panels have been installed along the roof of the walkway to help generate clean energy.

This walkway utilises Locker Group's Dragonscale™ perforated metal sheets as decorative parapets along sections of the link, with larger screens used for shielding around entry points.

The Dragonscale is custom coloured to represent the school's colours while also fitting seamlessly into the surrounding environment.

SPORTSHUB, UQ

PRODUCT: Custom perforated triangle facade

ARCHITECT: BVN Architects

PHOTOGRAPHER: Rob Burnett

Returning to the University of Queensland, the new St Lucia SportsHub features two playing fields above a 500 car capacity parking area with additional space for 200 bikes.

Incorporating green design elements such as rainwater collection and durable turf that reduces impact of play on natural grass, the SportsHub is an innovative and impressive design.

Locker Group created a facade for the SportsHub office. The frontage used custom designed sheets with three different triangular perforations, which provide a subtle texture. These were installed at offset angles, creating a striking three dimensional profile for a singular and unique project.

THE WINNING APPLIANCE STORE

 **PRODUCT:** Anodised Champagne

 **PHOTOGRAPHER:** Rob Burnett

The Winning Appliance Store is a long running family business, who have been dedicated to quality for their entire lifespan. The branches are known for their amazing interior design, the company opting for singular design solutions in each site rather than the cookie cutter approach taken by retail chains.

The designers used Locker Group's anodised Champagne perforated metal in their drop ceiling in the entry way, and as mounted panels on the walls of the test kitchen. Every sheet has a unique perforated pattern, and the matte finished gold sets off many of the other fixtures and products of the store.
