

AGT WHEAT BREEDING FACILITY, ADELAIDE

PRODUCT: Pic Perf - Facade

ARCHITECT: Ashley Halliday Architects

PHOTOGRAPHER: Rob Burnett

The Australian Grain Technologies (AGT) wheat breeding facility provides a state-of-the-art hub for innovative research that will aid Australian farmers for years to come. The site contains a specially designed greenhouse and laboratory alongside growth rooms.

Locker Group worked closely with Ashley Halliday Architects to produce a facade for the two main wings. This served to tie the buildings together and present an exciting first impression for anyone approaching the facility, as well as offering important sun shade.

The design was the first time that our Pic Perf panels were customised to feature square aperture holes. The finished result was a streamlined lineal look that reflected the forward-thinking work being done on the site.
